## “The Science of Camouflage”

**Natural Gear** Camouflage was born on a bow hunt in the Mississippi River bottoms of Arkansas in the early 90's, the inventor and his brother were hunting in separate locations a good ways away, with one wearing the latest camo pattern on the market, He noticed that he could still spot his brother in the timber a long ways away, he could even clearly pick him out 20 ft. off the ground and several hundred yards away, his camo hadn't broken his outline at all, in fact at that distance and about any distance it turned into the dreaded "dark blob", it was then that the decision was made to come up with a better camouflage pattern to improve upon all hunters ability to hide.

We begin experimenting with photography of Nature from all over the country and take note of the primary colors, shapes and vertical orientation that always tended to occur in nature.

After many attempts **Natural Gear's**, Original Camouflage pattern was born and taken to the marketplace in 1994, that same pattern is the one we still use today for our full line of clothing and accessories. We keep using it because it keeps working, Mother Nature hasn't changed her pattern and neither have we. Over and over again the stories come in: "I've never had deer that close and I hunt on the ground", "I had a turkey gobbling in my face at 5 yards", "I walked off to pick up a duck and when I turned around I couldn't see my crew". We still get excited to read every one of them. We are all hunters here and we want everyone to be able to experience what we have over and over again in the woods with Natural Gear. It works, give us a shot you won't be disappointed.

**Natural Gear** follows a few "Laws of Nature" as we like to call them:

**The Law of Tone:** **Natural Gear's** natural base is not to dark and not to light.

**The Law of Gravity:** **Natural Gear** has a distinct vertical orientation, which blends with nature's vertical environment.

**The Law of Shadows:** **Natural Gear** has no unnatural shadows; we let the sun cast the shadows.

**The Law of Open:** **Natural Gear** maintains an open design with a broad based pattern that has soft, blurry edges.

**The Law of Versatility:** We apply our Science in a few variations to ensure we have you covered in any specific situation.

**The Law of Science:** All of our patterns are soft edged photographic images of naturally occurring elements.

**The Law of Reality:** Ask anyone who wears **Natural Gear**. They will tell you just how effective our patterns are. That's reality, we just blend.
